

ResQ Pulse AI — AI-Powered Emergency Response & Disaster Intelligence Platform

ResQ Pulse AI is an intelligent emergency management platform that uses Artificial Intelligence to analyze, classify, and prioritize emergency situations for faster, more effective response.

Core Capabilities

AI-based incident analysis ·
Real-time monitoring · Severity
& priority classification ·
Analytics dashboard

Vision

"Building a smarter and faster
emergency response
ecosystem using AI."

Team

Team Name :Ai Alchemists —
Team Lead: Pravesh Nirmal
Member: Adhith Raghunath Nair

The Challenge: Slow & Inefficient Emergency Response

During disasters every second matters. Existing systems are often manual, fragmented, and unable to surface the highest-impact incidents automatically.

1. Delayed Response

Manual reporting and triage introduce critical delays for first responders.

2. No Intelligent Prioritization

Rescue teams struggle to identify which incidents need immediate action.

3. Information Overload

High volumes of reports during disasters make manual analysis infeasible.

4. Limited Real-Time Insights

Authorities lack a centralized, actionable dashboard to coordinate resources.

- ❏ Problem statement: "Existing systems lack AI-driven intelligence to analyze, prioritize, and coordinate responses effectively."

ResQ Pulse AI: Intelligent Emergency Response System

Transforms raw reports into prioritized, actionable rescue intelligence — accelerating decision-making and dispatch.

The platform automates the critical path from reception to dispatch decisions.

AI Incident Intelligence

Automatic classification of incident type, estimated damage, and location extraction.

Smart Priority Detection

Auto-ranks incidents: High / Medium / Low priority to guide dispatch.

Rescue Analytics Dashboard

Incident classification matrix, severity distribution, and live incident feeds.

Accessible Platform

Multilingual support and voice assistance for inclusive, fast reporting.

Market Opportunity & Impact

ResQ Pulse AI addresses a growing need for AI-driven public safety. Target markets include government agencies, emergency response teams, smart cities, and citizens — delivering faster reporting, better resource allocation, and measurable life-saving impact.

Government & Agencies

Real-time monitoring for coordinated disaster response and policy-level analytics.

Emergency Response Teams

Prioritization improves dispatch efficiency and rescuer safety.

Smart Cities

Integrates into public safety infrastructure for predictive resilience.

Citizens

Faster reporting, voice assistance, and multilingual support increase access to help.

Impact: "Reduce response delays, improve decision-making, and save lives through intelligent automation."

Hackathon Partner Technology Integration Roadmap

Mem0

Persistent AI memory layer — retains incident history and context to improve predictions.

Gnani AI

Voice & multilingual capabilities — enables spoken emergency reporting and assistant interactions.

Keploy

Automated API testing — ensures reliable, resilient backend processing under load.

Alchemyst AI

AI infra optimization — streamlines model deployment and runtime efficiency.

Slashy & Muesli

Productivity and workflow automation — accelerates incident documentation and response pipelines.

Integration Highlights

- Mem0: Context-aware incident memory improves triage accuracy over time.
- Gnani AI: Supports voice-first reporting for low-literacy or high-stress callers.
- Keploy: Continuous testing to guarantee uptime during peak disaster events.
- Alchemyst AI: Cost-efficient, scalable model serving for real-time inference.
- Slashy & Muesli: Orchestrated automation reduces manual steps for responders.

By combining best-of-breed partner technologies, ResQ Pulse AI will deliver a scalable, reliable, and human-centered emergency response ecosystem ready for real-world deployment.

- ✓ Ready for pilot: We seek validation partners, data integrations, and field testing opportunities.
